Important note on the antenna and control box

Laura - 2021-10-19 - Highway 400/600

Your antenna and controller should already be paired when you receive it. Simply turn on your ignition you should see the LED on the antenna light for 5 seconds then go out. A few seconds later your controller will automatically connect. You will see antenna connecting and then the controller will prompt you to select the language.

Note Please do not press the reset button on the antenna unless you need to re-pair the controller and antenna.
