Can I take my DAB radio abroad and receive the same stations there?

Laura - 2021-10-19 - DAB+ Radio

No. DAB digital radio is a terrestrial broadcast technology, using land-based transmitters. You can only listen to stations when you are within their transmission range as DAB still adheres to the laws of local terrestrial radio.

Taking your radio elsewhere will give you DAB transmission local to that area, providing the brodcast frequency is the same as your radio supports.
