Chronos CD Series II DAB+ Compatibility

Is my Pure Chronos CD Series II DAB+ compatible?

The easiest way to determine whether your Chronos CD Series II is DAB+ compatible is to check the software version installed. Comparing the beginning of the software version string with the DAB software version in the table below will give you certainty.

For example

V1.0_dab-fm-sermmi-FS2027-0000-0110_V4.0.13.27373-V1.0-1RC11

is

V1.x and only supports DAB.

NOTE: None of the DAB only products can be upgraded to support DAB & DAB+. This is why they are not listed on the DAB+ update site.

Product	DAB software versions	DAB audio codecs supported
Chronos CD Series II	V1.x	DAB only
Chronos CD Series II	V2.x	DAB & DAB+
Chronos CD Series II	V4.x	DAB & DAB+
Chronos CD Series II	V5.x_UK	DAB only
Chronos CD Series II	V5.x_M	DAB & DAB+

Checking the software version

To check the software version of your Chronos CD, press Menu. Then scroll to and select SW version. This will display the current version on screen. Press any button to exit.
