How do I switch my Bloom on and off?

Customer Support - 2026-08-28 - Bloom

Would you like to know how to switch your Bloom on and off?

1. Press and hold the volume control (on/off button) for 2 seconds to switch your Bloom on.

2. When using your Bloom for the first time, turn the control to select the language.
   Confirm your selection by pressing the control.

3. The device will then automatically perform a DAB scan.
   All available stations will be found and saved to the ‘Station List’ without you having to do anything.

4. To switch off the Bloom, press and hold the ‘Volume’ dial until the device switches off.

The standby display is only visible when the device is connected to an external power supply.
