Highway 300Di installation with active FM antenna

Laura - 2021-10-19 - Highway 300Di

Highway 300Di provides a DC path to allow the connection of a phantom power supply from the car head unit - through Highway - to supply any existing active aerial solution. This is always connected, so does not require the FM-pass through to be enabled in the installer menu. This menu option is only required if you want to listen to FM when Highway is powered.
