How to manage my favourites on a web browser?

Customer Support - 2026-05-05 - Classic H4i

You would like to manage your favourites on a web browser?

To manage your Internet radio favourites, you can also access your Classic H4i/Classic C-D6i directly by using the IP address of the unit.

To do this, simply enter the IP address in your browser.

The IP address of your Classic H4i/Classic C-D6i can be found in '**Configuration**' - '**Network information**'.

- Once accessed, you will find a list of your saved favourites.
- These can be selected for playback, edited, moved or deleted.
- You can also export your favourites 'Channel Presets' as a file to save them on your PC.
- Should it ever be necessary to reset your device to the factory settings, you can restore your favourites using this file.
- If you are listening to a station that you have not yet saved, you can simply add it to your favourites by pressing a single button.
- To add a station that cannot be found in the search, simply copy the URL of the respective stream and add it manually to your favourites.
