Managing presets via an embedded configuration web-page

Customer Support - 2025-02-04 - Evoke Spot / Play / Home

Managing presets via an embedded configuration web-page.

To access the web-page:

1. Switch the speaker to the mode you want to manage presets for.
2. On the speaker select Menu - System settings - Network - View settings
3. Scroll to the bottom of the page and make a note of the IP address (for example 10.40.225.42)
4. Type the IP address into a web browser on a PC connected to the same network to load the page
5. Select the Presets tab to manage the presets (see screenshot below).
6. You can also add custom presets if you know the URL

The screenshot shows the 'FRONTIER SMART TECHNOLOGIES' web interface. At the top, there is a navigation bar with tabs for 'Status', 'Network', 'Update', 'Presets', and 'Report'. The 'Presets' tab is selected. Below the navigation bar, the page title is 'Internet radio mode'. There is a 'Show 10 entries' dropdown menu. The main content area is a table with three columns: 'Preset', 'Name', and 'Action'. The table contains 10 rows. The first two rows have names: 'Capital London' and 'BBC Radio 2'. The 'Action' column for each row contains 'Play' and 'Edit' buttons. The first two rows have both 'Play' and 'Edit' buttons, while the remaining eight rows only have 'Edit' buttons. At the bottom right of the table, there is a pagination control with 'Previous', '1', '2', '3', '4', and 'Next' buttons. The '1' button is highlighted.

Preset	Name	Action
1	Capital London	Play Edit
2	BBC Radio 2	Play Edit
3		Edit
4		Edit
5		Edit
6		Edit
7		Edit
