Managing presets via an embedded configuration web-page

Customer Support - 2025-02-04 - [Evoke Spot / Play / Home](#)

Managing presets via an embedded configuration web-page.

To access the web-page:

1. Switch the speaker to the mode you want to manage presets for.
2. On the speaker select Menu - System settings - Network - View settings
3. Scroll to the bottom of the page and make a note of the IP address (for example 10.40.225.42)
4. Type the IP address into a web browser on a PC connected to the same network to load the page
5. Select the Presets tab to manage the presets (see screenshot below).
6. You can also add custom presets if you know the URL

The screenshot shows the 'Internet radio mode' configuration page. At the top, there's a header with the 'FRONTIER SMART TECHNOLOGIES' logo and a language dropdown set to 'English'. Below the header is a navigation bar with tabs: 'Status', 'Network', 'Update', 'Presets' (which is active), and 'Report'. The main content area is titled 'Internet radio mode' and includes a 'Show 10 entries' dropdown. It contains a table with 10 rows, each representing a preset. The first two rows are populated with 'Capital London' and 'BBC Radio 2'. The remaining eight rows are empty. Each row has a 'Preset' number in the first column, the 'Name' in the second, and an 'Action' column with 'Play' and 'Edit' buttons. At the bottom right, there is a pagination control showing 'Previous', '1' (selected), '2', '3', '4', and 'Next'.

Preset	Name	Action
1	Capital London	Play Edit
2	BBC Radio 2	Play Edit
