How do I set up my Evoke One?

Customer Support - 2026-10-29 - Evoke One

Would you like to set up your Evoke One and connect it to the internet?

When you press the volume control, your Evoke One will start playing the source you last listened to.

1. When you switch on your Evoke One for the first time, the device will launch the ‘Set-up Wizard’.
2. You will first be asked to select a language.
3. To do this, turn the dial to the desired language and confirm your selection by pressing the dial.
4. Next come the time settings.
5. Here you can set the time zone, choose between 12-hour and 24-hour formats, configure automatic updates, and set the daylight-saving mode.
6. This is followed by the network settings.
7. Once the search for available networks is complete, select your SSID and enter your Wi-Fi password to connect to your network.

Once setup is complete, your Evoke One will automatically start a DAB scan.

All available stations will be found and saved to the DAB station list.
