How to scan and select DAB stations on a Woodland Mini? Customer Support - 2024-10-22 - Woodland Mini

You would like to search for DAB+ radio stations and select them on your Woodland Mini?

- 1. When you use Woodland Mini for the first time, the DAB scan happens automatically. All available stations are found and saved in the "**Station list**".
- 2. To change the DAB station, tap on one of the "**Skip**" buttons to access the "**Station** list".
- 3. Using the "**Skip**" keys, you can now step through the available stations by repeatedly pressing the keys, or scroll through the list by holding the keys pressed. This works in both directions.
- 4. Once you've found the station you want, press the "**Play/Pause**" key to select the station.
- 5. You can also release the "**Skip**" key currently pressed, and the radio will tune to the station displayed.

For a **new scan** simply keep the **Band** select button pressed while being in DAB mode. Your Woodland Mini will then delete all stored DAB stations and automatically begin scanning for all available stations.
