How long do the batteries of the wireless controller last?

Laura - 2021-10-19 - Highway 400/600

The wireless display is powered by 2x AAA batteries which are provided in the box. Based on our commuter user case and the default 15s display time out the battery life would be around 8months.

Daylight = 9months

Night time (with button LED's on) = 6months

Note: Battery life will reduce if the display time out is increased.
