Managing presets via an embedded configuration web-page

Customer Support - 2025-02-04 - [Evoke Spot / Play / Home](#)

Managing presets via an embedded configuration web-page.

To access the web-page:

1. Switch the speaker to the mode you want to manage presets for.
2. On the speaker select Menu - System settings - Network - View settings
3. Scroll to the bottom of the page and make a note of the IP address (for example 10.40.225.42)
4. Type the IP address into a web browser on a PC connected to the same network to load the page
5. Select the Presets tab to manage the presets (see screenshot below).
6. You can also add custom presets if you know the URL

The screenshot shows the 'Presets' tab in the 'Internet radio mode' section of the Frontier Smart Technologies web interface. The interface includes a navigation bar with 'Status', 'Network', 'Update', 'Presets', and 'Report' tabs. Below the navigation bar, there is a table with 10 rows of presets. The first two rows are populated with 'Capital London' and 'BBC Radio 2'. The remaining rows are empty. Each row has a 'Play' button and an 'Edit' button. The table is titled 'Internet radio mode' and has a 'Show 10 entries' dropdown. At the bottom right, there is a pagination control with 'Previous', '1', '2', '3', '4', and 'Next' buttons.

Preset	Name	Action
1	Capital London	Play Edit
2	BBC Radio 2	Play Edit
