## Radio does not switch on when powered from the mains

Laura - 2023-05-22 - General Questions

### **My radio is no longer powering up/switching on. What could be wrong?**

If you find your radio no longer switches on and appears dead, it's more likely to be the power supply rather than the radio. Try a new power supply before assuming the radio is faulty.

If you require a new power supply, please check the availability in our [web-shop](#)
